DETAILED ACTION

Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required:

Claims 13-15, 17-19, 22-24 and 82 state an article of manufacture comprising a machine-readable medium having stored thereon instructions to perform the stored program recited in the claims. The examiner notes that the specification fails to define a machine-readable medium or an article of manufacture. The examiner further notes that Paragraph 0069 states that the invention may be implemented using a broadcast medium, as well as Paragraph 0070 stating that the present invention may be implemented using an electronically-readable medium that permits a computer to perform the functions of the present invention. The claims must recite the terminology in the specific in order for the examiner to determine the scope of the claim. The examiner recommends clarifying that the article of manufacture is a computer and the machine-readable medium is a disk used by the computer to store the program instructions executed by the computer to perform the process recited in the claims.

Therefore, the examiner cannot determine if the claims refer to a signal or a memory/CPU in a computer system, therefore the claims are deemed non-statutory under U.S.C. 101.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 13-15, 17-19, 22-24 and 82 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Because of the lack of antecedence between the claim limitations and the specification, the examiner has determined that the article of manufacture can comprise a machine-readable medium, wherein the machine-readable medium comprises a transmission signal (**see Paragraph 0069**), which is non-statutory subject matter (**see MPEP 2106**).

The examiner further notes that even if a computer and memory is amended into the claim limitations, unless the claims recite a positive recitation of the computer executing the instructions stored on the disk, the claims would still be deemed non-statutory subject matter for the claims simply reciting a memory that stores computer program code (**see MPEP 2106**).

Allowable Subject Matter

Claims 1-3, 5-7, 10-12, 25-26, 28-30, 32-34, 79 and 85 are allowed.
